

Introduction

The Continence and Catheter Care Formulary is available for all practitioners prescribing and/or procuring urology products and other bladder and bowel care medical devices for adults throughout Pennine Lancashire.

The Formulary has been devised by a panel of practitioners who have specialist knowledge and expertise in urology, bladder and bowel care. This reflects the North West Urology Framework, supported by Shared Business Services NHS. It aims to provide a clinically and cost effective choice of products to manage a range of urology, bladder and bowel care needs for adults.

Local Policies and Procedures should be adhered to. Appropriate training by practitioners must be undertaken and competencies maintained in relation to the selection, use and prescribing of items listed in this formulary.

It is expected that the vast majority of products will be selected from this Formulary. Products listed as ‘specialist initiation only’ may be prescribed ONLY following assessment by, or discussion with Urology, Urogynaecology, or Bladder and Bowel Service Clinicians. If any product is required which is not listed, the rationale for this should be documented in the patient record, and when ordering via the East Lancashire Appliance Prescription Service the exception should be documented on the Continence Prescription Request Form and within the patient notes.

Foley Catheters

Brand/Supplier	Indications for Use	Code	Description	Pack Size	Order Frequency	Traffic Light
Teleflex	Short Term catheters Designed to stay in place for 28 days. Suitable for urethral and suprapubic use Includes 1x catheter, 1x 10ml sterile syringe for deflation, 1x 10ml syringe pre filled with water	DP210112	PTFE Coated Latex 2way Foley catheter, Female 10ml balloon, Size 12Ch	Box of 1	Order 3 Initially , then 1 at a time	Green
